is equal to

## "Greater Than" and "Less Than" Game

## Objective:

Students will compare the values of 2-digit numbers using symbols and words.

## Materials:

Each team will need a game page, a pencil, and a die.

## How to play:

Player 1 and player 2 each roll a die twice to make 2-digit numbers. They record their rolls on the page.
example: Player 1 rolls a 5 and then a 2.
Player 2 rolls a 1 and then a 3.
They will write the numbers on the game board like this:

The player with the greater number wins the round. If the numbers are equal, there is no winner for that round.

## Management Suggestions:

Encourage students to read the final number sentence aloud at the end of each round.
Instead of a die, you may want to play the game with a spinner or number cards.
The game moves quickly, so you may want to make double-sided game boards to allow students to play up to 16 rounds.
